- HCV by NSF (05.2024)** The HCV mark shows that equipment is suitable for a HACCP-controlled environment. It approves that food safety and that the compliance of food contact materials with EU 1935/2004 requirements has been verified.
- KC / KFDA** (the system is also in accordance with KC and KFDA directives for South Korean market)

Notice: *Our production sites in Germany are fully complaint with Iso 9001-2015; Iso 14000; UL ATM requirements as well as NSF directives; incl. KTC approval for SK))*

Barista Productions GmbH & Co KG
Part of Cup&Cino Family

The designated product fulfills the following use cases in being appropriate to process food to be consumed by humans:

Cross Contamination caused by processing two different drink types:

- The designated product keeps the level of contamination below 1% in a 100ml drink. (accordingly, below 0,5% in 200ml etc.)
Of course, mixed drinks are excluded from these considerations.

Regarding intolerances, following HACCP and required risk management the relevant ppm values are much higher for the released countries, therefore, using the machine with the appropriate settings, the ppm levels are below critical and there is no risk of triggering intolerances. This needs to be confirmed regularly at the LAF system.

Regarding allergic reactions, following HACCP and required risk management the machine will keep the contamination below 1% in 100 ml (and lower for bigger volumes). The risk and contamination vary according to the allergic trigger. To be in line with local rules and directives, the machine needs to be included into the HACCP or similar risk management system. The correct function and setting shall be confirmed regularly at the LAF system (in accordance with local directives or company guidelines).

Users are also advised to include an allergen statement such as "Product may contain traces of ..." at the point of sale, to inform the customer.

After performing cleaning and flushing tests in independent external labs, it has been ensured that all bacteriological and organic matter are eliminated with the machine cleaning procedure.

In the case of non-milk-based drink types (non-dairy, oil in water emulsions), please contact us to approve the fulfillment of directives and the processability of the fluids.

For any questions about these topics or required setting of the machines please contact us.
