LAF Configtool

to use the Configtool make sure that your device has
Windows 10 and Java 8
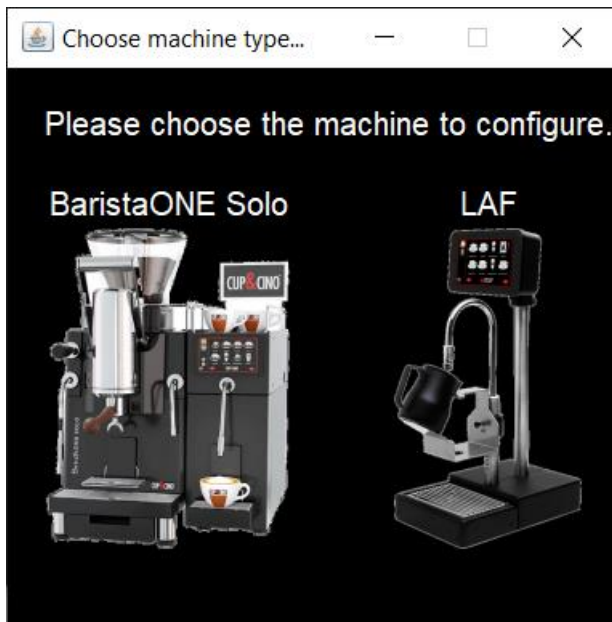

Step1

open run.

## Step2

then a pop up should appear click on LAF no matter which LAF
you use.

Step3

now you see the same interface as on the machine now you can create your own configuration.

Step4

- go to the menu.
- now click on languages settings to choose the languages you need.
- for example, A is German, and B would be Danish (English is the main language)
- now go back and go to language selection.
- and click on language A the middle.

Step5

- now they go to Milk Airflow settings.
- there you can individually set your phases which temperature, air, names you need but you can also set later the machine.
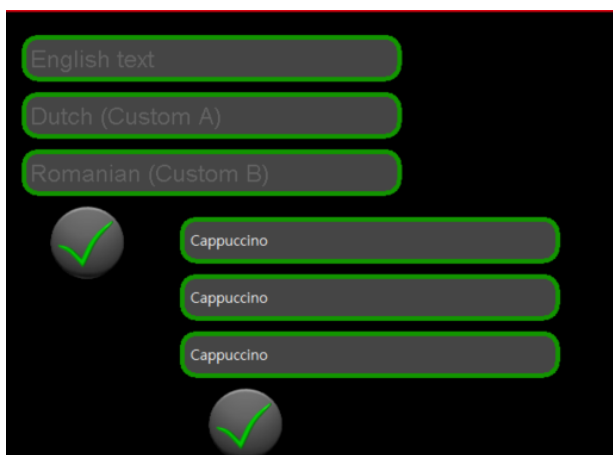

Step6

- now you can start adding your product groups.
- press new on the plus symbol.
- and then again on the plus symbol.
- Press Choose a name...

Step7

- name your product group in which case it would be Cappuccino.
- you can name the product group in 3 different languages or all the same.

Step8

- add a picture for your product group.
- the plus symbol on the left is for the here product and on the right for the Togo product.
- when you have added the name and the pictures press the green check mark.

Step9

- now should be a product group to see.
- Click on the product and you should be taken to a blank page.
- now you can add up to 9 products.
- press the plus symbol.

Step10

- Now add a product
- Click on product name.
- click on the plus symbol and create a new product do not click on the existing name.
- then add a product image.

Step11

- now you can also add the phases for your product.
- add all 3 phases even if you don't use them all, otherwise you won't be able to add a phase later the machine.
- if you have added a phase, you can also change the dispense time or later on the machine itself.

Step12

- now you should have a product.
- the same should also be done now for the Togo product.
- Repeat the same process as described in step 11.
- only click on Togo this time
- but the Togo product will not appear it is invisible at that time.

Step13

- If you have created the Togo, Corresponding product is also possible.
- there you should find your Togo product click on the green check to add it.
- then the respective name should be there in the corresponding product.
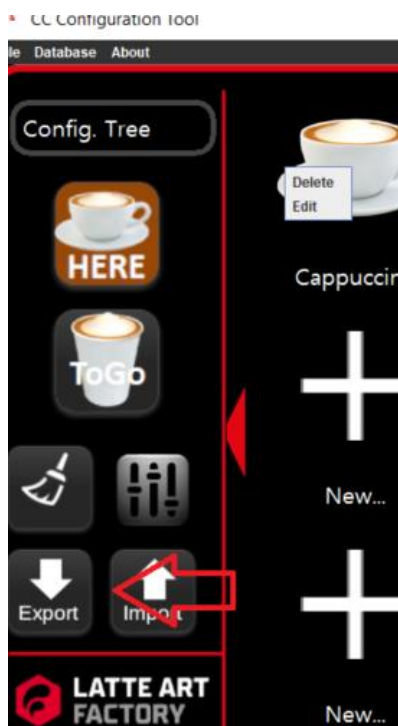

Step14

- You can also modify or delete products and product groups by right-clicking on them.
- and if you want to delete all of them, just click on the broom.
- of course, the products are not completely gone, but only from the interface. you can add the created products again by pressing the plus symbol.

Step15

- If your configuration is ready, you can now download it to the USB stick.
- click on the Export symbol.
- Now you can transfer the configuration to the USB port.

Step16

- If you want to change your configuration in the future, you could create a Save.file
- To do this, press File in the top left-hand corner.
- There you will see the name Save.
- click on it and save file.
