# LAF Software Update and new Configuration

## Step1

- You need a USB stick.
- <span style="color:red">Very important</span> the USB stick must be called <span style="color:red">UPDATESTICK</span> written together, and all letters capitalized.
- they do their new software or configuration.
  on the USB stick make sure the file is not in a folder

| Dieser PC > UPDATESTICK (D:) | | | | ∨  ↻ | ⌕ UPDATESTICK (D:) durchsuchen |
|---|---|---|---|---|---|
| Name | | Änderungsdatum | Typ | | Größe |
| Dänemark.conf | | 03.04.2023 15:59 | CONF-Datei | | 14.960 KB |
| LAFPROv14.update | | 26.07.2023 13:52 | UPDATE-Datei | | 18.136 KB |

## Step2

- insert the USB stick into the port.
- on the left is the bar and on the right is the Classic displayed

## Step3
- Go to the technical settings.
- Press Software Update

## Step4
- first insert the USB stick and then press Update.

## Step5

- now a white screen should appear with the respective files that are on the USB.
- select the respective file and then press Install.
- as soon as the file has been successfully uploaded a green check mark appears.
- now you can turn off the machine and then restart it the new update or configuration should be installed on the machine now.
